

Forest Insect and Disease Update

Insects and diseases can weaken or kill trees valuable to both homeowners and forest landowners. Abnormal weather, such as last fall's drought or the wet year we are currently experiencing, can cause insect or disease problems not seen in more normal years.

This workshop is designed for anyone interested in maintaining healthy trees, whether a few trees by a home or trees occupying thousands of acres. Specialists in plant pathology and entomology will address problems and solutions to tree health issues.

Topics will include:

- Tree insect update
- Tree disease update
- Common insect and diseases problems
- Creating low-care landscapes

WHEN

Wednesday, Sept. 27

Registration--1:00 p.m.

Program--1:30-4:30 p.m.

Adjourn—4:30 p.m.
